

The MVUBU - A BETTER BUILDING BLOCK

An Eastern Cape brick factory is producing a building block that is set to change the way homes and yard walls are built in the Eastern Cape.

The Mvubu is a FACE BRICK

You will watch your neighbour repainting the outside of his house or yard wall many times.

You will have the time to help him, because you won't have to paint yours – EVER.

Paint is not getting cheaper.

Think about how much money your family will save over 5 years, 10 years, 20 years!

The MVUBU is a CLAY BRICK

Clay bricks are great insulators.

Clay bricks keep the inside of your house warmer for longer in winter and cooler in summer.

Clay bricks also keep sound in (or out) better than most other building materials.

If you are interested one of our experienced sales staff can give you the technical information.

The Mvubu is strong, really strong.

You can use it in your foundations. You can build a double storey house with it.

You cannot do that with a normal M6 block – even if it is made to SABS standards.

Why did Makana Brick make this brick?

Because it offers great value and it just makes sense.

A MVUBU wall is cheaper than you would imagine.

The finished cost of building a house with the Mvubu is similar to the finished cost of building with a concrete block, but offers so much more long-lasting value.

For similar money, you get so much more.
